

IBM X41 TABLET BATTERY LIFE BULLETIN

The Dual Battery chargers purchased for the IBM x41 Tablet for the iTeach iLearn program are currently unavailable for delivery due to a world-wide shortage. Based on the latest schedule, IBM plans on deploying the Dual Battery Chargers at the Tablet schools during the week of June 15th.

Following is information which will be helpful for you in planning your instructional schedule:

- Fully charged batteries last between 1 – 2 hours
- Recharging batteries within device takes 1.5 hours

Please note: the Tablet either needs to be powered off or in hibernation mode to replace the battery. It can not be in Suspend mode or you lose files or damage the machine.

Until the Dual Battery Chargers are deployed at your school, the Tablet will be the only device for charging the primary and spare batteries at the schools. In order to have two fully charged batteries, you would need to find an appropriate time during the school day to leave the Tablet in the cart to charge the batteries.

The Office of Instructional Technology and IBM regret the inconvenience. Please contact us with questions or concerns. OIT - Jennifer Kupinse, jkupinse@nycboe.net or IBM - Tony Russo, arussol@us.ibm.com.
